Conclusion:

We have had 112 student respondents and 134 adult ones. There are no big differences between the students' and the adults' results.

Some interesting results:

A big percentage of adults sometimes recycled plastic bottles.

The question in the quiz was not very clear. In the past 10 years there was an increase of little waterbottles. We drop empty bottles with the garbage. Since a few years we have collected them separately for recycling. You can drop big bottles at supermarkets and you receive a few eurocents then.

Many people participate actively in separating waste. We put it in different boxes in the villages and towns. We call it an "environmentstreet".

There's an ignorance of LED lighting, animalfriendly cosmetics and unleaded fuel.

Most students and adults take care of birds. Many people feed birds in winter and many people build or place birdhouses.

In general many people in the Netherlands think green and they are environmentally conscious. They try to protect and save nature.
